DETAILED NOTES FOR TABLE 2

Age (21–24) takes value 1 if the individual is aged 21 to 24 and 0 otherwise (omitted). *Age* (25–34) takes value 1 if the individual is aged 25 to 34 and 0 otherwise. *Age* (35–44) takes value 1 if the individual is aged 35 to 44 and 0 otherwise. *Age* (45–54) takes value 1 if the individual is aged 45 to 54 and 0 otherwise. *Age* (55–60) takes value 1 if the individual is aged 55 to 60 and 0 otherwise. *White* takes value 1 if the individual is white and 0 otherwise (omitted). *Black* takes value 1 if the individual is black and 0 otherwise. *Asian* takes value 1 if the individual is Asian and 0 otherwise. *Other Ethnic* takes value 1 if the individual is of an ethnicity other than black, white or Asian and 0 otherwise. *Single* takes

NOTES: The figure presents the change in the budget constraint of a single parent with one child (aged under 11) with an hourly wage of £4.39 (median for single parents) from Family Credit in April 1999 to WFTC in October 1999. It also assumes a rent of £41.10 per week (median for social renters with children) and no childcare costs. This figure is taken from Dilnot and McCrae (1999).

FIGURE A.1. Budget constraint for single parents.

TABLE A.1. Parameters of family credit and WFTC (£ per week).

	April 1999 (FC)	October 1999 (WFTC)	June 2000 (WFTC)	June 2001 (WFTC)	June 2002 (WFTC)
Basic credit (£)	49.80	52.30	53.15	54.00	62.50
Child credit (£):					
under 11 years old	15.15	19.85	25.60	26.00	26.45
11 to 16 years old	20.90	20.90	25.60	26.00	26.45
over 16 years old	25.95	25.95	26.35	26.75	27.2
30-hour premium (£)	11.05	11.05	11.25	11.45	11.65
Threshold (£)	80.65	90.00	91.45	92.90	94.50
Taper (%)	70%	55%	55%	55%	55%
Help with childcare	Childcare expenses up to £60 (£100 for 1 (more than 1) child under 12 disregarded when calculating income	70% of childcare expenses up to 100 (150) for 1 (more than 1) child under 15	70% of childcare expenses up to 100 (150) for 1 (more than 1) child under 15	70% of childcare expenses up to 100 (150) for 1 (more than 1) child under 15	70% of childcare expenses up to 135 (200) for 1 (more than 1) child under 15

Note: The table shows the main parameters of Family Credit and WFTC. *Basic credit* is the basic amount of tax credit given to eligible household. *Child credit* are the supplements per child in the household, which vary depending on the age of the child. *30-hour premium* is the supplement given if the individual works 30 hours or more. *Threshold* is the weekly earnings threshold above which the tax credit is reduced. *Taper* is the rate at which the tax credit is reduced once total earnings after income tax and National Insurance are above the threshold.

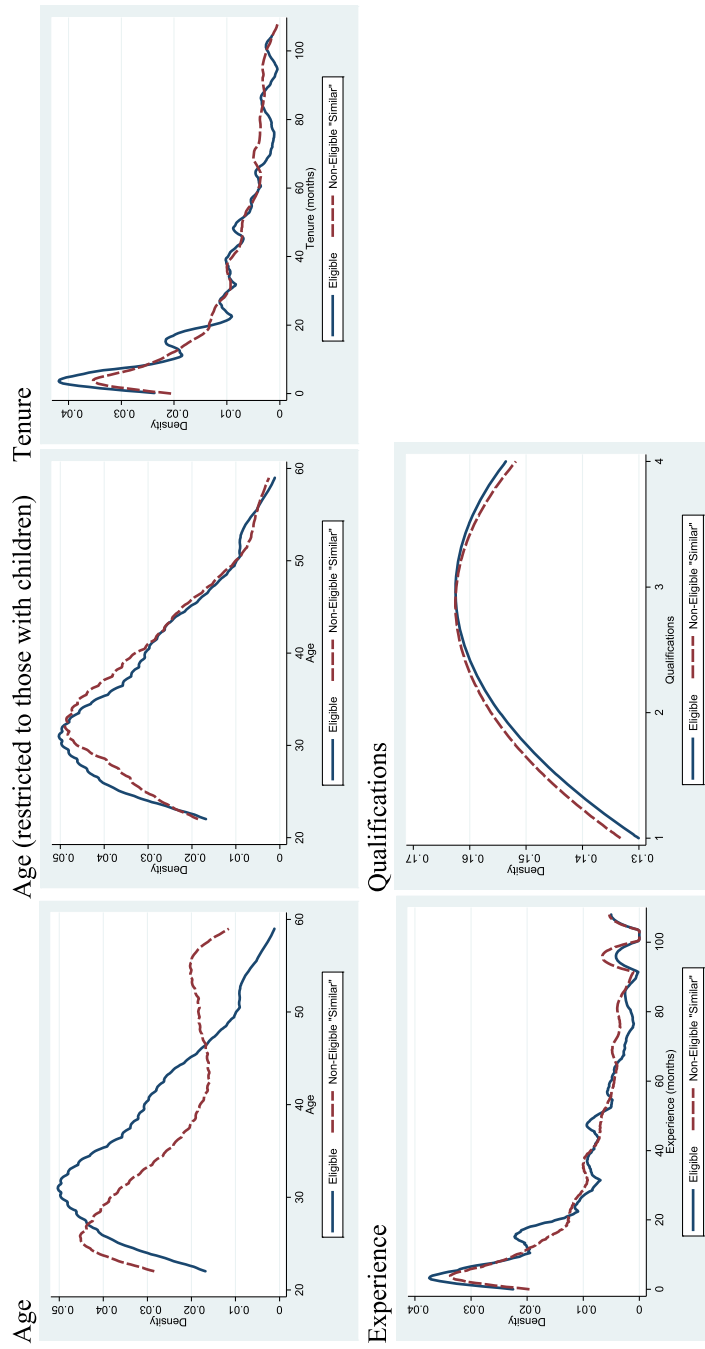

NOTES: The figure presents the change in the budget constraint of a man in a couple whose spouse is not working from Family Credit in April 1999 to WFTC in October 1999. It assumes they have one child (aged under 11) with an hourly wage of £5.87 (25th percentile for men in couples with children). It also assumes a rent of £41.10 per week (median for social renters with children) and no childcare costs. This figure is taken from Dilnot and McCrae (1999).

FIGURE A.2. Budget constraint for man in couple.

NOTES: The figure presents the change in the budget constraint of a woman in a couple who is working and whose spouse is working from Family Credit in April 1999 to WFTC in October 1999. It assumes they have one child (aged under 11), she has an hourly wage of £3.72 (25th percentile for women in couples with children) and the spouse has an hourly wage of £5.87 and works 40 hours per week. It also assumes a rent of £41.10 per week (median for social renters with children) and no childcare costs. This figure is taken from Dilnot and McCrae (1999).

FIGURE A.3. Budget constraint for woman in couple.

NOTES: “Eligible” are workers eligible for WFTC. “Noneligible (“Similar”)) are workers not eligible for WFTC but are matched based on their predicted wage, \hat{W}^c . The figures compare the characteristic of eligible and noneligible at $5\% \leq \hat{W}^c \leq 10\%$ of wage distribution. *Age* (restricted to those with children) is a continuous measure of age in years. *Age* (restricted to those with children) are measured in months. *Qualifications* takes value 1 if individual has a university degree; 2 if individual has stayed in school until 18 years and has A-Level or equivalent qualifications; 3 if individual has stayed in school until 16 years and has GCSE or equivalent qualifications; 4 if individual has no qualifications.

FIGURE A.4. Kernel density of characteristics for men—matched (pre-WFTC).

NOTES: “Eligible” are workers eligible for WFIC. “Noneligible (“Similar”)” are workers not eligible for WFIC but are matched based on their predicted wage, \hat{W}^c . The figures compare the characteristic of eligible and noneligible at $5\% \leq \hat{W}^c \leq 10\%$ of wage distribution. *Age* is a continuous measure of age in years. *Age (restricted to those with children)* is a continuous measure of age in years but the sample is restricted to those with children under 16 years of age. *Tenure* and *Experience* are measured in months. *Qualifications* takes value 1 if individual has a university degree; 2 if individual has stayed in school until 18 years and has A-Level or equivalent qualifications; 3 if individual has stayed in school until 16 years and has GCSE or equivalent qualifications; 4 if individual has no qualifications.

FIGURE A.5. Kernel density of characteristics for women—matched (pre-WFIC).

Time dummies	Yes	Yes	Yes	Yes	Yes	Yes
Observations	89,994	30,261	59,733	91,761	32,559	59,202

Note: The coefficients and standard errors (in parenthesis) are reported. *** represents significance at the 1% level, ** represents significance at the 5% level, and * represents significance at the 10% level. Standard errors are bootstrapped with 200 replications. We include a full set of time dummies (each quarter of each year) in all the regressions. The regression is based on equation (3), where *Predicted wage* (\hat{W}^c) is the predicted wage, which has been corrected for changes in average earnings and general inflation using quarterly indexes, t . *WFTC* (TC^d), calculated as the weekly WFTC divided by households' weekly (predicted) income, measures the direct effect of WFTC on eligible workers. *FC generosity* (ΔTC) is the change in households' entitlement from Family Credit to WFTC divided by households' weekly (predicted) income. *Spillover* (TC^s) is the average WFTC (weighted by the fraction of eligible) in each industry group (*Industry*) and education group (*Education*), respectively.

a: MEN

b: WOMEN

NOTES: The plots show the estimates of the residual wage difference of the predicted wage (i.e., the counterfactual wage) from the actual wage separately for eligible (“Eligible”) and noneligible (“noneligible”) workers in 1998, before the introduction of WFTC.

FIGURE A.6. Kernel density of residual wage in pre-WFTC period.
