THE GOAL OF THE SERIES is to promote the publication of high-quality research works in the fields of Economic Theory, Econometrics, and Quantitative Economics more generally. Publications may range from more or less extensive accounts of the state of the art in a field to which the authors have made significant contributions to shorter monographs representing important advances on more specific issues. In addition to the usual promotion by the Publisher (Cambridge University Press) in their advertising and displays at conferences, it also arranges for members of the Econometric Society to receive monographs at a special discount.

The publishing arrangement with Cambridge University Press specifies that the reviewing process and the decision to publish a monograph in the series rests solely in the hands of the Editors appointed by the Society, in the same way as for papers submitted to *Econometrica*. Our experience shows that this procedure generates quite valuable services to the authors. Referee reports are usually very professional, and contain detailed and specific suggestions on how to improve the manuscript. Such services, which are not normally offered by private publishing companies, are among the features that distinguish the Monograph Series of the Society from others.

The complete list of publications in the series follows; the original publication dates of the hardcover (HC) and paperback (PB) versions are given.

All 63 monographs are now available for electronic purchase, and available online to Econometric Society members free of charge.

40. J. Roemer, *Democracy, Education, and Equality*, HC&PB 1/06.

The Editors welcome submissions of high-quality manuscripts, as well as inquiries from prospective authors at an early stage of planning their monographs. Note that the series now includes shorter more focused manuscripts on the order of 100 to 150 pages, as well as the traditional longer series of 200 to 300 or more pages. Information on submissions can be found on the society webpage. Andrea Prat is the Co-Editor responsible for economic theory and Stéphane Bonhomme is the Co-Editor responsible for theoretical and applied econometrics.
