# THE ECONOMETRIC SOCIETY ANNUAL REPORTS 

REPORT OF THE SECRETARY

## European Summer Meeting

AUGUST 22, 2021
The World Congress of the Econometric Society, which takes place once every five years, is arguably the most far-reaching global conference for economics and related fields. Due to the COVID-19 pandemic, the Executive Committee of the Society together with Bocconi University decided to lead the way into then-unchartered territory and organize a ground-breaking international virtual economics conference in record time during a very difficult period. Past President Orazio Attanasio, as Chair of the World Congress Organization and Main Lectures Committees, deserves credit for convincing many of the parties involved that this was the correct decision for the Society to take. The resulting event, though not without its challenges and flaws, posted record-breaking attendance, reaching more than 4200 people across 85 countries and 24 time zones, and presenting 73 live-streamed plenary, semi-plenary, and policy sessions and 1288 contributed presenters in 334 2-hour sessions with 14 hours of daily of continuous live content during five full days.

Unfortunately, COVID-19 continued to ravage the world for the rest of 2020 until the present, upending most of the Society's plans. For that reason, incoming President Penny Goldberg assembled an ad-hoc Virtual and Hybrid Conferences Committee chaired by At-large Executive Committee member Dirk Bergemann and made up of other Executive Committee members and representatives from the six regional standing committees. The menu of virtual tools and practical solutions for the organization of such meetings that this committee provided, together with a tremendous amount of work by committed program chairs, local organizers, and many volunteers, allowed the Society to hold all of its six scheduled regional meetings and two of its schools to date. In addition, it is anticipated that the final three 2021 regional meetings and its international school will also be completed by the end of the year. Most meetings were conducted entirely virtually, except in the case of Africa, whose regional meeting and companion school took place using a hybrid format, with some participants physically present in Abidjan (Ivory Coast) but many others attending online, a model that was also used by the Asian Summer School in Econometrics and Statistics that recently took place in Beijing. The Society owes special debts of gratitude to the officers and members of its regional standing committees, program chairs, local organizers, virtual vendors, and all those who helped it continue to meet its mission during such trying times.

In addition to its meetings, the Society continued its other core activities, most notably ensuring publication of the Society's flagship journal, Econometrica, and its two highly-rated open access journals, Quantitative Economics and Theoretical Economics. The editors of these journals, Chris Taber and Ran Spiegler, respectively, completed their terms at the end of June, 2021 and two new editors stepped in to take their places Stéphane Bonhomme, who moved from editor of the Monograph Series to Quantitative Economics editor, and Simon Board, who took the helm at Theoretical Economics. The

[^0]Society thanks the departing editors for their continued service and commitment to excellence and welcomes their successors, as well as Serena Ng , who replaces Stéphane Bonhomme as Monograph Series editor in charge of Econometrics and Empirical Economics.

Other highlights include another year of record membership growth, and increased access to the journals primarily through institutional publishing consortia deals, while individual institutional subscriptions continue to wane.

Finally, despite substantial remaining uncertainty, 2022 boasts a full schedule of meeting, schools and workshops. Hopefully, many of them will be in-person meetings once again, but as in the last two years, the Society will quickly adapt to the changing circumstances if need arises.

Following are more specific details and charts outlining the past year's changes.

## 1. ECONOMETRIC SOCIETY RULES AND PROCEDURES

2020/21 was also an unusually active period for the Council and the Executive Committee of the Econometric Society, which met three and five times, respectively, in less than 12 months. Although the main focus of some of these meetings was the World Congress, many other decisions were thoroughly discussed and approved. Those directly related to elections are discussed in section III, but some of the others were:

1. Double membership in Africa will continue until at least 2024, but now requires a formal application process that the Society central office must approve.
2. New contingent plans which guarantee that the governance of the Society would not be adversely affected by the replacement of an officer for any reason while, at the same time, maintaining the electoral calendar as is, including the work of the Officers and Council Nomination Committee.
3. Reinstatement of the Executive Director title, which had been renamed General Manager in 2005.
4. More precise guidelines for the coverage of the President's Report, which from 2021 onwards will be submitted no later than 3 months after his/her presidency finishes.
5. A re-statement of the need for Fellows to be active before they might vote in any decision related to the Econometric Society, as required by the By-Laws.
6. For the purposes of organizing academic meetings exclusively, the vast Asian region has been divided into three sub regions: South Central and Western Asia, the Chinese region, and East and Southeast Asia.
7. The transformation of the ad-hoc Schools Committee into a standing one, consisting of a chair and two or three additional members representing different regions and fields appointed by the Executive Committee for three-year terms. Its main task is to review proposals for Summer/Winter Schools, Workshops and related activities for young scholars sponsored by the Society in order to build research capacity in areas defined geographically or by subject where participants have limited exposure to methods, outstanding teachers and researchers.
8. A symmetric treatment between the rule for publication of the Presidential Lecture and the lectures submitted to Econometrica by requiring that the invitation to deliver the Fisher-Schultz and the Walras-Bowley lectures is also an invitation to submit a suitable version of the lecture to the journal within 18 months from their delivery.
9. During the World Congress the first ever meeting of the officers of the six regional standing committees took place, which included a discussion on support options from the Society Central Office, details on the Lecture Series calendar, Annual and Regional meetings, Summer and Winter Schools, Workshops, and Young Researcher Fund. This new meeting has now become an annual affair which will typically take place in the first quarter of the year so that the regions can make plans knowing the most recent decisions of the Executive Committee and Council.
10. Finally, the calendar for regional committee elections approved in 2020 was reviewed to give more time to the Regional Standing Committees to decide the names of the two candidates for each vacancy that stand for election and confirm their eligibility and willingness to serve.

## 2. MEMBERSHIP AND INSTITUTIONAL SUBSCRIPTIONS

Once again, the Society's individual membership hit an all-time high at the end of 2020, fueled in part by the record number of submissions and attendance to the World Congress. Membership increased year-end 2020 and mid-year 2021. Year-end membership for 2019 was at 6903 compared to the end-of-year 2020 membership number of 7098. Mid-year 2020 numbers were 6271 compared to 2021 mid-year of 6285. Student membership hit a record end-of-year high for 2019 reaching 1252, but fell significantly by end-of-year 2020 to 1062 , probably due to the cancellation of most schools in 2020. In contrast, mid-year 2021 student memberships (1083) are clearly above the mid-year 2020 figure (754).

The Society's membership numbers are illustrated in Figures 1 and 2 and presented in Table I (Part A), where the membership is classified according to individual membership and institutional subscribers. Table II compares the Society's membership and the number of institutional subscribers with those of the American Economic Association (AEA).

Overall, since 2017, the Society has experienced a steady increase in individual memberships when compared to AEA, with the Society reaching $1 / 3$ of the AEA's total individual membership numbers. Society and AEA membership figures include ordinary, student, free, and lifetime members.

Figure 1.-Membership by type, Mid-Year

Figure 2.-Membership by type, Full-Year

While institutional publishing revenues fell again in 2020 (see the Treasurer's Report for further details), year-end and mid-year institutional licensing of Econometrica, Quantitative Economics and Theoretical Economics broadened considerably, according to the statistics compiled by Wiley, the publisher of the Society's journals.

There have been significant changes in the publishing industry in the last few years. Not only are online subscriptions growing while print ones keep declining, but individual institutional subscriptions are no longer the norm. Institutions which historically paid a full-rate subscription to Econometrica still pay an equivalent amount of revenue through the Wiley license, but with a cap on annual price increases. On the other hand, many other institutions which did not historically have a subscription to the journal have gained access via either collections or the "All Journals" license. The majority of these customers are consortia with dozens of individual institutions, or smaller groups like a state university system with multiple institutions under a parent account. Wiley has also signed "read and publish" agreements with several European countries, which have implications for open access, as explained in the Treasurer's report. The journal gets a smaller amount of revenue from those institutions, but this is additional to the revenue from the core subscribers and extends the reach of the journal's content to thousands more institutions.

A consequence of all these changes is that the way the Society reports access statistics to its journals must be updated. Prior to 1997, when journals began publishing online, circulation numbers were based entirely on print distribution. In recent years, though, the "Reach by Access" statistics Wiley produces provide a better representation of the journals' reach among institutions. Those statistics show that the steady decline in institutional subscriptions with the traditional model have been more than compensated by the rapid increase in the other categories. The figures for 2019 and 2020, though, suggest a plateau, which will need to be reassessed once the 2021 figures are eventually released.

Since 2017, the Society's institutional subscriptions have increased annually while the AEA's subscriptions have decreased each year. This year is no exception. In 2019, the Society had 3835 compared to AEA's 1948, leaving the Society with almost twice the number of institutional subscribers as the AEA with the ES/AEA ratio for institutional subscriptions reaching a remarkable 1.97:1. For 2020, it is difficult to make a direct comparison for the reasons explained above, but Wiley's statistics indicates an essentially constant reach,

TABLE I (PART A)
Institutional Subscribers and Members End of Year 2020

| Year | *Institutions | Ordinary | Student | Soft <br> Currency | Gratis | Life | Total <br> Members | Total <br> Circulation |
| :--- | :--- | :--- | ---: | :--- | ---: | ---: | ---: | ---: |

| 2016 | 1596 | 5261 | 1219 | - | 134 | 43 | 6657 | 8253 |
| 2017 | 1852 | 4853 | 999 | - | 145 | 42 | 6039 | 7891 |
| 2018 | 2244 | 5068 | 1224 | - | 148 | 42 | 6482 | 8726 |
| 2019 | 3835 | 5485 | 1252 | - | 135 | 31 | 6903 | 10,738 |
| 2020 | 7176 | 5888 | 1062 | - | 117 | 31 | 7098 | 14,274 |

*Beginning in 2021, Wiley Publishers shifted how it reports circulation data, focusing on the reach of its full subscription packages including consortia with multiple subscribers as opposed to individual subscriptions, which are no longer the norm in institutional publishing.
while the AEA reports a drop from 1948 for 2019 to 1787 in 2020. The growing difference between the Society's publishing program and AEA's can be attributed to the Society's use of a commercial publisher compared to AEA's in-house publishing model.

Figure 1 highlights mid-year membership growth and Figure 2 looks at end-of-year membership and institutional publishing growth.

Table III displays the mid-year division between print and online and online-only memberships and subscriptions. Since the choice between these two alternatives was offered in 2004, the trend has been a shift to online-only for ordinary and student categories. Mid-year 2020, online-only ordinary subscriptions reached $91 \%$ and student-only $90 \%$, however by mid-2021, online-only ordinary and student trends split, with ordinary falling to $83 \%$ online, but student increasing to $92 \%$.

Regarding the division between print and online-only for institutional members, $100 \%$ of institutional subscribers reached with the license model have opted for an online subscription. The trend continues toward online-only too for those individual, non-license institutional subscribers, as seen in the graph when comparing 2019 with 2020 data from Wiley Publishers. Wiley no longer provides mid-year data, so no figure for 2021 is available.

TABLE I (Part B)
Members Mid-Year 2021

| Year | Ordinary | Student | Soft Currency | Gratis | Life | African Scholars | Total Members |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1980 | 1978 | 411 | 53 | 45 | 74 | - | 2561 |
| 1985 | 2316 | 536 | 28 | 55 | 71 | - | 3006 |
| 1990 | 2571 | 388 | 57 | 73 | 69 | - | 3158 |
| 1995 | 2624 | 603 | 46 | 77 | 66 | - | 3416 |

| 2004 | 2965 | 784 | - | 111 | 60 | - | 3920 |
| 2005 | 3996 | 1094 | - | 106 | 57 | - | 5253 |
| 2006 | 4020 | 1020 | - | 110 | 58 | - | 5208 |
| 2007 | 4393 | 916 | - | 97 | 58 | - | 5464 |
| 2008 | 4257 | 759 | - | 89 | 56 | - | 5161 |
| 2009 | 4268 | 744 | - | 81 | 56 | - | 5149 |
| 2010 | 4684 | 949 | - | 86 | 56 | - | 5775 |
| 2011 | 4147 | 7466 | - | 92 | 56 | - | 5041 |
| 2012 | 4524 | 762 | - | 93 | 56 | - | 5435 |
| 2013 | 4194 | 777 | - | 106 | 27 | - | 5104 |
| 2014 | 4151 | 828 | - | 149 | 27 | - | 5155 |
| 2015 | 4156 | 894 | - | 105 | 27 | - | 5182 |
| 2016 | 4577 | 955 | - | 107 | 43 | - | 5682 |
| 2017 | 4723 | 952 | - | 147 | 43 | - | 5865 |
| 2018 | 4540 | 963 | - | 146 | 43 | - | 5691 |
| 2019 | 4582 | 1014 | - | 141 | 42 | - | 6009 |
| 2020 | 5365 | 754 | - | 121 | 31 | - | 6271 |
| 2021 | 5020 | 1083 |  | 90 | 31 | 61 | 6285 |

Table IV looks at the geographic distribution of ordinary and student members by countries and regions at mid-year of the current and selected previous years. The Table provides individual data on countries with five or more members and group data for countries with fewer than five members (unless the country now has fewer than five but once had five or more in which case it remains included individually). The data is presented in fiveyear blocks beginning in 2000. After losing members in 2019, the African region climbed back up to 77 members in 2020. In 2021, with the implementation of the Fund for African Scholars and the decision by the Central Office and the African Regional Standing Committee to provide free 3-year memberships to young African scholars as one initiative of the fund, the Africa region grew to a total of 138 members including 61 new African Scholars. It must also be noted that Africa is the only region for which double membership is allowed. Thirty-two members from other regions have explicitly declared secondary affiliations to this region, bringing the total number of mid-2021 African members to 170. Asia experienced the largest numbers increase, jumping by $9 \%$ to 1379 mid-year 2021 from mid-year 2020 of 1235. Australasia, after falling to 228 last year from 269 in 2019, began to make gains again, increasing to 235 mid-year 2021. In contrast, the number of members in Europe experienced the largest drop of any region, falling from 1996 midyear 2020 to 1748 mid-year 2021, a loss of 248 members. Latin America experienced a membership drop as well, falling from 251 mid-year 2020 to 239 mid-year 2021. Finally, North America posted a gain of 62 members from 2484 to 2546 . These changes are also

TABLE II
Institutional Subscribers and Members Econometric Society and American Economic Association (End of year 2020)

| Year | Institutions |  |  | Individual Members |  |  |

[^2]apparent in Table V , which shows the percentage distribution of members by regions as of mid-year of the current and selected previous years. Overall, North America continues to have more members than any other region ( $40.5 \%$ ) with Europe and Other Areas second $(27.8 \%)$ and Asia third (22\%). Africa has the least members with $2.1 \%$ but experienced the largest percent increase thanks to the African Scholars program. When including Africa's secondary memberships, the region represents $2.7 \%$ of all Society members, just shy of the required $3 \%$ to secure a Council seat. In turn, Australasia reached $3.7 \%$ and Latin American fell to $3.8 \%$.

TABLE V

Finally, Table VI, presents the distribution of institutional subscribers' reach by regional access for full-year 2020. Beginning in 2020, Wiley began collecting data based on different new regional and country groupings. For example, while China and Japan have their own numbers, the remainder of Asia is included in "Rest of World" along with Africa and Latin America, so break-outs for those three regions no longer match previous years. With these new breakouts and type of reporting, Australasia, Japan, the UK and the rest of Europe fell, while Canada, the US, the Rest of World and especially China all increased significantly.

## 3. FELLOWS

## Fellows Membership Statistics

A modern Econometric Society tradition is to publish the list of living fellows in Econometrica coinciding with the World Congress instead of every year. In 2020 the list included 712 fellows, with $510(72 \%)$ considered active by the definition in the Society's By-Laws.

On June 30, 2021, there were 757 total living Fellows, including those elected in 2020, of whom 524 were regarded as active. Table VII displays the geographic distribution of those fellows active as of mid-year 2021. Currently, fellows (active or not) come from 31

[^3]countries, but two of the countries, United States (510) and the United Kingdom (66) combine to represent more than $76 \%$ of all fellows. After the US and the UK, the top five countries for fellows are France (34), Israel (21), Australia (17), Japan (13) and Canada (12) followed by Spain (11).

## Fellows Elections

Table VIII provides information on the nomination and election of Fellows. Since 2006, the election has been conducted with an electronic ballot system. This immediately led to a very significant increase in the participation rate that has maintained an average $76 \%$ over 15 years. Participation reached a high in 2018 at $84 \%$, declining to $79 \%$ in 2019 and slightly over $80 \%$ in 2020.

Last year's Secretary report described in detail several decisions adopted by the Executive Committee and Council in recent years affecting the election of fellows, the most important of which being the reduction of the threshold for electing new fellows from $30 \%$ to $25 \%$ with effect on the 2020 elections, which was approved by nearly $80 \%$ of the fellows who participated in a special vote.

TABLE VIII
Fellows’ Voting Statistics

[^4]In 2020, the Executive Committee also decided to fully randomize the order of the fellows' ballots within regions, thereby addressing long-standing concerns about alphabetical discrimination. Unfortunately, in regions with many candidates, such as North America and Europe, long, randomly ordered lists complicated finding any one name, and made voting slower. As a result, the Executive Committee and Council recently voted to adopt the so-called "Round Robin" approach to randomization, whereby one name from each region's list is chosen at random and then, after this first name, the rest of names are listed alphabetically with A following Z . In addition, from this year onwards, when scrolling over a candidate name, the 125 -word nomination statement will show up as a "bubble" without the need to click on each form to read it.

In 2020, there were 146 candidates, 39 proposed by the Fellows Nominating Committee, 91 rollover candidates and 27 new nominees, with 6 individuals nominated by both a member and the Committee. Nevertheless, 5 candidates who received fewer than 3 endorsements were dropped from the final list. The elections resulted in 46 new fellows ( 9 females and 37 males), which is in line with the projections I presented to the Executive Committee and Council in the spring of 2020. In contrast, only 14 new fellows would have been elected with the former $30 \%$ threshold. For regions, 3 newly elected fellows were affiliated with Africa, 2 with Asia, 3 with Australasia, 9 with Europe, 2 with Latin America and the remaining 27 with North America.

After a detailed discussion of these results soon after they became known, the Council agreed not to change any electoral rule for at least a couple of years so that the Society could use the results of the 2021 and 2022 elections to see the effects of the lower threshold on the steady state number of fellows elected every year.

Nevertheless, in January 2021 the Executive Committee proposed two changes related to the nomination process, which were ratified by the Council at its annual meeting in May. First, the nominating period for fellows will finish mid-April as opposed to late April. Second, membership of the Fellows Nominating Committee would no longer be restricted to Council members. Specifically, from 2022 onwards the committee may incorporate other active Fellows with the goal of bringing a less senior and more diverse set of candidates to the committee's attention. Since this required a change in the Society By-Laws, a special vote took place in May 2021, which resulted in a $95.7 \%$ approval rate among those fellows who participated.

## Regional Standing Committee Elections

Regional Standing Committees are responsible for establishing procedures for the organization of meetings and other Society activities in each region. Following the recommendations of the 2012 Governance Committee chaired by Oliver Hart, the Articles of Incorporation of the Society require that the Regional Standing Committees have at least five voting members, including the Council members from the region, with at least two of them elected for a non-renewable four-year term in a ballot of the members of the region. These annual elections usually take place after all the other Society elections are completed and involve three phases. First, the members of the Society residing in a region nominate potential candidates through the Society's web site. Then, the corresponding Regional Standing Committee acting as a nominating committee will choose, after consultation with the Executive Vice-President, a number of candidates equal to twice the number of vacancies, with final voting by all
members taking place on the Society's web site. From 2021 onwards, each of these phases will take 10 days, so that the entire process can finish before the end of October.

Despite the fact that the Society By-Laws give a prominent role to the elected members of the Regional Standing Committees, with at least one of them necessarily appearing as candidate in the elections to the Council, and that candidates for these slots are not restricted to be active fellows either from the region or with a secondary affiliation to the region, participation in the regional elections is unfortunately low. In fact, there were only 390 members who voted in 2020, as opposed to 599 in 2019. The Society would like to strongly encourage all its members to participate in these important elections, whose outcome can genuinely influence its decisions.

## 4. 2021 MEETINGS AND SCHOOLS

## The 2020 World Congress

As already explained in last year Secretary's report, the Executive Committee, in conjunction with Bocconi University and the scientific program chairs, met in the spring of 2020 in response to the coronavirus crisis, and decided that the 2020 World Congress, which had received almost 3000 submissions, would become a virtual event. Despite the multiple challenges that this decision posed, in the end the World Congress was a transformative event for the Society. It provided $700+$ hours of content over 14 hours a day during five full days, and included a mix of 73 live-streamed plenary, semiplenary, and policy sessions, 3342 -hour pre-recorded sessions with their corresponding live Q\&A sessions, and 24 live networking sessions. More importantly, the quality and breadth of the invited and contributed scientific program was outstanding, providing a state-of-the-art picture of the research frontier in economics and related disciplines. In addition, the World Congress brought together 4248 participants (1289 presenters and 2959 non-presenters), increasing inclusiveness and accessibility in a way not previously possible, especially for those in far-flung regions or developing countries, for whom cost and travel barriers would have been a strong deterrent. As a reference, the highly successful 2015 World Congress in Montreal attracted 1600 on-site participants.

Unfortunately, virtual conferences cannot provide the same networking experience as physical ones, and for the reason the Society is already eagerly making plans for the next World Congress, which will hopefully get together many of its members. Specifically, last summer the Executive Committee decided to change the structure of the scientific committee so that it resembles more closely the structure of the editorial boards of the Society's journals, with a main scientific program chair and three co-chairs under the head chair. In addition, early next year the Executive Committee will update the bidding process guidelines to incorporate a hybrid component to the 2025 World Congress. Based on the submitted bids, and a decision on its location will be taken in the summer of 2022.

## Regional Conferences and Schools

COVID-19 continued to ravage the world well into 2021 so regrettably, hoped for inperson meetings could not take place. Thankfully, right at the beginning of her presidency, Penny Goldberg assembled an ad-hoc Virtual and Hybrid Conferences committee chaired
by At-large Executive Committee member Dirk Bergemann and made up of other Executive Committee members and representatives from the six regional standing committees. The committee produced a very useful document with a detailed menu of virtual tools, including ratings and pricing, and practical solutions for the regions to access. This initiative, in conjunction with the dedication of committed program chairs, local organizers and many volunteers, allowed all six Society regions to forge ahead with planning, ensuring that all meetings and the majority of schools could take place when planned. Most events were conducted entirely virtually, except in the case of the African regional meeting and companion school, and the Asian Summer School in Econometrics and Statistics, which took place using a hybrid format, with some participants physically present in Abidjan (Ivory Coast) and Beijing (China), respectively, but many others attending online.

While continued uncertainty made it more difficult than usual for the regions to plan for next year, the list below confirms that they are scheduling their 2022 meetings, schools and workshops in the hope and expectation that most of them will take place in-person.

EnRique Sentana

## 2022 SCHEDULE OF ECONOMETRIC SOCIETY MEETINGS AND SCHOOLS

2022 North American Winter Meeting (VIRTUAL)
Jan 6-9, 2022
with ASSA
2022 African Meeting
June 1-4, 2022
IFPRI-Addis Ababa
and the Ethiopian Economic Association
Addis Ababa, Ethiopia
2022 North American Summer Meeting
June 16-19, 2022
University of Miami
Miami, Florida (USA)
2022 Asian Meeting
June 22-24, 2022
The Chinese University of Hong Kong, Shenzhen
Shenzhen, China
2022 Australasian Meeting, Brisbane, Australia (VIRTUAL)
July 6-8, 2022
University of Queensland
Brisbane, Australia

2022 Asia School in Economic Theory July 25-29, 2022
National University of Singapore
Singapore
2022 Asian Meeting in East and Southeast Asia,
Aug 4-6, 2022
Keio University
Tokyo, Japan
2022 European Summer Meeting
Aug 22-26, 2022
Bocconi University
Milan, Italy
2022 Latin American Meeting
Nov 3-5, 2022
Universidad del Pacífico
Lima, Perú
2022 European Winter Meeting
Dec 16-18, 2022
Humboldt University
Berlin, Germany

2021 SCHEDULE OF ECONOMETRIC SOCIETY MEETINGS AND SCHOOLS (IN REVERSE ORDER WITH TOP FIVE STILL TO TAKE PLACE)

2021 Asian Summer School in Economic
Theory, Bangalore
Dec 16-20, 2021
Bangalore, India
CANCELLED
2021 European Winter Meeting (VIRTUAL)
Dec 16-18, 2021
University of Barcelona School
of Economics
Barcelona, Spain
2021 Delhi Winter School (VIRTUAL)
Dec 15-18, 2021
Delhi School of Economics
Delhi, India
2021 Latin America Meeting (VIRTUAL) Oct 20-23, 2021
Universidad del Rosario,
Bogotá, Colombia
Joint with the Latin American and Caribbean
Economic Association (LACEA)
2021 Dynamic Structural Econometrics
Summer School/Conference (HYBRID)
Aug 16-22, 2021
University of Bonn
Bonn, Germany
2021 European Summer Meetings
(VIRTUAL)
Aug 23-27, 2021
University of Copenhagen
Copenhagen, Denmark
2021 Asian Summer School in Econometrics and Statistics (HYBRID)
July 12-17, 2021
School of Economics and Management,
Chinese Academy of Sciences
Beijing, China

2021 Australasia Meeting of the Econometric
Society (VIRTUAL)
July 7-9, 2021
University of Melbourne
Melbourne, Australia

## 2021 China Meeting (VIRTUAL)

July 1-3, 2021
School of Entrepreneurship and
Management,
ShanghaiTech University
Shanghai, China
2021 Asian Meeting (VIRTUAL)
June 25-27, 2021
Curtin University Malaysia
Miri, Malaysia

2021 North American Winter Meeting
(VIRTUAL)
Jan 2-5, 2021
joint with ASSA

[^0]:    I would like to thank Executive Director Lyn Hogan for her contributions to preparing this report though all errors remain my own.

[^1]:    ${ }^{\text {a }}$ This chart does not include lifetime or gratis members.

[^2]:    a "Active" refers to members whose dues are paid and up to date. Only countries with 5 or more members are listed individually. Until 2005 , some countries were grouped together, so their individual membership data are not available.
    ${ }^{\text {b }}$ Until 2005 the data for France includes Luxembourg.
    ${ }^{\text {c }}$ Until 2005 the data for Greece includes Cyprus.
    ${ }^{\text {d }}$ Until 2005 the data for Italy includes Malta.
    ${ }^{\mathrm{e}}$ Until 2005 the data for Russia corresponds to the Commonwealth of Independent States or the USSR.
    ${ }^{\mathrm{f}}$ Until 2005 Hong Kong Special Administrative Region appeared as Hong Kong and was included in South and Southeast Asia.
    ${ }^{\mathrm{g}}$ These numbers represent Africa's primary members only, however, note that Africa is the only region allowed to count secondary memberships toward its total which includes an additional 25 self-identified secondary Africa members. Until 2014 the data for Africa was designated under Europe and Other Areas, as Other Africa. Since its formal designation in August 2013, Africa is listed as an individual region.
    ${ }^{\text {h }}$ Until 2015 data for Asia was placed under Far East \& South \& Southeast Asia. The former region totals are listed for reference.

[^3]:    ${ }^{\mathrm{a}}$ As of June 30, 2021.
    ${ }^{\mathrm{b}}$ These numbers are based on primary affiliations. However, fellows can list a secondary affiliation. In this case, two European and one North American fellow have a secondary Africa affiliation.

[^4]:    *Total living and active as of Dec. 31 of each year post-election. Other figures are at time of elections.
